

## Role : Jr DevOps Engineer – Engineering

---

Job No:

Experience: 2-4 years

Location: Bangalore/Hyderabad (serving the US region)

Shift Timings – Needs to be Flexible

### Position Summary:

At Regalix, now A Market star Company, you will have the opportunity to work in a dynamic environment that thrives on collaboration, embraces cutting-edge technologies, and delivers impactful solutions to our clients. With a shared commitment to excellence, innovation, and client success, we are setting new benchmarks in the market. By leveraging Regalix's deep understanding of digital marketing strategies and Marketstar's proven track record in driving sales and customer engagement, we have forged a unique synergy that propels us to the forefront of our field. Together, we will shape the future of our industry and achieve new heights of success.

With our eyes set on the future, we are looking for an energetic, outcome-oriented **Jr DevOps Engineer** to join our Engineering Team. As a Junior DevOps Engineer, you will work closely with our development and operations teams to ensure the smooth integration and delivery of software applications. You will be responsible for assisting in the development, deployment, and maintenance of our infrastructure, as well as implementing automation and monitoring solutions to optimize our software development lifecycle.

Read on to understand more about this opportunity.

## Key Responsibilities:

### Infrastructure Management:

- Assist in the design, implementation, and maintenance of our cloud-based infrastructure, ensuring scalability, availability, and security.
- Collaborate with senior DevOps engineers to set up and manage virtualized environments, containers, and orchestration tools.
- Monitor system performance, troubleshoot issues, and implement solutions to optimize infrastructure efficiency.

### Continuous Integration and Deployment:

- Contribute to the configuration and maintenance of our continuous integration and deployment (CI/CD) pipelines, using tools such as Jenkins, GitLab CI/CD, or similar.
- Assist in automating the build, test, and deployment processes to ensure fast and reliable software releases.
- Collaborate with development teams to streamline the integration of new features and bug fixes into the deployment pipeline.

### Infrastructure as Code (IaC):

- Collaborate with senior DevOps engineers to define and implement Infrastructure as Code (IaC) principles, using tools such as Terraform, CloudFormation, or similar.
- Assist in the creation and maintenance of infrastructure templates and configuration files to automate infrastructure provisioning and management.

### Monitoring and Alerting:

- Contribute to the setup and maintenance of monitoring and alerting systems, such as Prometheus, Grafana, or similar tools.
- Assist in monitoring system and application performance, analyzing metrics, and proactively addressing any issues or bottlenecks.
- Collaborate with the operations team to ensure prompt and effective incident response and resolution.

### Security and Compliance:

- Assist in implementing security best practices and ensuring compliance with industry standards and regulations.
- Contribute to vulnerability management processes, including regular security assessments and patching.
- Collaborate with the security team to implement and maintain access controls and secure network configurations.

#### **Collaboration and Documentation:**

- Work closely with development, operations, and other cross-functional teams to promote a collaborative and productive work environment.
- Contribute to the documentation of infrastructure, processes, and configurations to ensure knowledge sharing and smooth onboarding of new team members.
- Participate in team meetings, code reviews, and agile ceremonies to contribute to the overall development and deployment process.

#### **What will you need to succeed in this role?:**

- Strong problem-solving and troubleshooting skills.
- Excellent communication and collaboration abilities.
- Ability to adapt to a fast-paced and dynamic environment.

#### **Qualifications:**

- Bachelor's degree in computer science, engineering, or a related field.
- 2-4 years of experience in a DevOps or related role.
- Familiarity with cloud platforms such as AWS, Azure, or GCP.
- Basic understanding of CI/CD principles and tools such as Jenkins, GitLab CI/CD, or similar.
- Knowledge of scripting languages (e.g., Bash, Python) for automation tasks.
- Understanding of Infrastructure as Code (IaC) principles and tools such as Terraform, CloudFormation, or similar.
- Exposure to containerization technologies like Docker and container orchestration tools like Kubernetes.
- Familiarity with monitoring and alerting systems such as Prometheus, Grafana, or similar.
- Basic understanding of networking concepts and security best practices.

## What's in it for you?

- Constant Learning and an entrepreneurial growth mindset
- Employee centric benefits plan including but not limited to Comprehensive Health Insurance, generous Leave Policy, Covid Support, Vaccination drives, Wellbeing sessions, real time grievance redressal and work flexibility
- We are a people-first organization with policies and process that help you bring the best version of yourself into work including fast track growth for high potential folks
- An opportunity to be associated with the world's leading brands as clients
- To be a part of an organization with more than 60% of homegrown Leaders
- Customized training programs that are catered to personal and professional development
- We are an equal opportunities employer. We believe passionately that employing a diverse workforce is central to our success.

**Budget: 12-15 LPA**

## Important Points
